

Muhammad Latif Harkat

Software Engineer | Full Stack Developer | Backend Developer

Indonesia latipharkat48@gmail.com github.com/mevander88

PROFESSIONAL SUMMARY

Software Engineer specializing in full-stack development, scalable backend systems, high-performance APIs, infrastructure, automation, cybersecurity, professional SEO, and maintainable system architecture. Experienced in project management, production application development, multi-source data processing, worker orchestration, database optimization, cloud deployment, security tooling, and organic search growth.

PROFESSIONAL EXPERIENCE

Project Manager | PT Mitra Pulsa Nasional

PROJECT MANAGEMENT

- Planned software projects, analyzed requirements, managed tasks, and monitored delivery progress.
- Coordinated development activities, technical documentation, quality assurance, and deployments.
- Communicated technical progress and delivery requirements with project stakeholders.

Full Stack Developer | PT Sero Mula Mandiri

SOFTWARE ENGINEERING

- Developed and maintained frontend applications, backend services, REST APIs, and database integrations.
- Improved application performance, resolved production issues, and supported deployment workflows.
- Provided system maintenance and technical support across the application lifecycle.

Freelance Full Stack Developer | Independent

FREELANCE

- Translated client requirements into full-stack web applications, backend systems, APIs, and database designs.
- Built automation solutions, integrated external services, deployed applications, and maintained production systems.
- Provided technical consulting for architecture, implementation, infrastructure, and performance.

EDUCATION

Vocational High School - Software Engineering | SMK Informatika CBI

INDONESIA

Coursework in software development fundamentals, programming, databases, web development, system analysis, and application engineering.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, PHP, C#, Go, Java, Kotlin

Frontend: React, Next.js, HTML5, CSS3, Tailwind CSS, Bootstrap

Mobile Development: Kotlin, Flutter, Android, Firebase

Backend: Node.js, Express, Flask, FastAPI, Django, Laravel, CodeIgniter, ASP.NET, GoFiber

Databases: PostgreSQL, MySQL, MongoDB, Redis

DevOps: Docker, Nginx, Linux, GitHub Actions, CI/CD, PM2, cloud deployment

Architecture: REST API, microservices, clean architecture, service-oriented architecture

Cybersecurity: Web security, API security, network analysis, security research, vulnerability assessment

Professional SEO: SEO research, technical SEO, keyword research, on-page SEO, backlink strategy, Google Search Console, content strategy, programmatic SEO

Tools: Codex, Git, Postman, Burp Suite, VS Code, WSL, ADB, Scrcpy

KEY ACHIEVEMENT

Organic SEO Growth - Google Search Console

Generated more than 200,000 organic search impressions and 15,000 clicks within 28 days through professional SEO research, technical optimization, content strategy, and backlink development.

200K+ impressions | 15K+ organic clicks | 28 days | SEO and backlinks

SELECTED PROJECTS

Anime Streaming and Comic Platform

Engineered a complex web platform for anime streaming and comic reading with automated scraping pipelines, search, comments, likes, user interactions, caching, SEO, and scalable media delivery.

Next.js, GoFiber, PostgreSQL, Redis, web scraping

Anime and Comic Android Application

Built an Android client backed by a high-performance API for content discovery, synchronized activity, comments, likes, search, and processed scraping data.

Android, GoFiber, PostgreSQL, Redis, REST API

MutasiOPS

Developed enterprise financial mutation automation connected to multiple Android devices with high-concurrency processing, real-time monitoring, worker management, and reliable queues.

ADB automation, multi-device orchestration, workers, queues, real-time monitoring

WebDok

Developed a data aggregation and business management platform with multi-source scraping, centralized worker management, queue processing, job monitoring, financial reporting, and administrative analytics.

Multi-source scraping, worker orchestration, data processing, monitoring, reporting

WA Blast Platform

Created a WhatsApp campaign platform for bulk delivery, contact segmentation, message scheduling, delivery monitoring, and scalable queue-based processing.

WhatsApp integration, REST API, Redis, queues, campaign management

PLTS Management System

Built a solar power plant management system for operational monitoring, asset and maintenance management, performance analysis, and centralized technical dashboards.

Data processing, asset management, analytics dashboards, monitoring

CORE SPECIALIZATIONS

Scalable backend systems; high-performance APIs; database optimization and caching; infrastructure and deployment; DevOps automation; security and automation tooling; Android debugging and automation; production-ready application development.
